65

Malignant breast cancers were diagnosed among male Idahoans during 2017-2021.

1 in 4

Breast cancers were diagnosed at an advanced stage.

WHAT CAN YOU DO

- Know your family history of cancer and tell your provider if it changes.
- Discuss the best screening plan for you with your provider.
- Women at average risk for breast cancer should get a screening mammogram every other year starting at age 40.
- Women at higher risk are women with a lifetime risk of breast cancer of ~20% or more, according to risk assessment tools. These women may:
 - » Have a known BRCA1 or BRCA2 gene mutation (based on having had genetic testing).
 - » Have a first-degree relative (parent, sibling, or child) with a BRCA1 or BRCA2 gene mutation and have not had genetic testing themselves.
 - » Have had radiation therapy to the chest when they were between the ages of 10 and 30.

5 YEAR SURVIVAL

10 in 100

Female Idahoans will die from their cancer within five years of diagnosis.

7 in 100

Female Idahoans will die of something other than cancer within five years of diagnosis.

83 in 100

Female Idahoans will still be alive within five years of diagnosis.

BREAST CANCER SCREENING

You may be eligible for FREE breast cancer screening. Idaho Women's Health Check provides free breast (and cervical) cancer screenings and diagnostic testing to low-income, uninsured women.
